

Investigate a natural gas and oil well

1. Use the supporting documents to investigate a natural gas and oil well. Answer the following:

- Who is the landowner?

- Who is the owner/operator/producer?

- How much natural gas and oil is produced by this well?

2. Select historic record to answer the following questions:

- When was this well completed (list the date)?

- What is the producing formation (prod. form)? (Geologic engineers need to know this information.)

3. Use the topographic map to determine the elevation of the well you are investigating.

(The contour interval is 20 ft.)

4. Create notes about this particular well to share to share.
